Mol. Biol. (Mook.) 24:968-976(1990).
Mol. Biol. (Mook.) This protein is synthesized in the early as well as
-!- MISCELLANEOUS: This protein is synthesized in the early as well as
the late phase of infection.
-!- SIMILARITY: Belongs to the poxviruses I3 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                "Molecular-biological study of vaccinia virus genome. II. Localization and nucleotide sequence of vaccinia virus genes coding for proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vaccinia virus (strain L-IVP) (VACV).

Falcon; TISSUE=Leaf;
Buchanan-Wollaston V., Ainsworth C.;
Submitted (SEP-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Metallothionelins have a high content of cysteine residues that bind various heavy metals.
-!- SIMILARITY: Belongs to the metallothionein superfamily. Type 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Brassica naque (Rape).

-I- FUNCTION: VIP causes vasodilation, lowers arterial blood pressure, stimulates myocardial contractility, increases glycogenolysis and relaxes the smooth muscle of trachea, stomach and gall bladder.

-I- SUBCELLULAR LOCATION: Secreted.

-I- SIMILARITY: Belongs to the glucagon family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                 stimulates myocardial contractility, increases glycogenolysis and relaxes the smooth muscle of trachea, stomach and gall bladder.
-!- SUBCELIUMAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the glucagon family.
FUNCTION: VIP causes vasodilation, lowers arterial blood pressure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
